DevOps and Site Reliability Engineer with over 4 years of experience in designing, automating, and managing enterprise-scale cloud-native platforms. Expertise includes Kubernetes, OpenShift, Docker, Helm, ArgoCD, GitOps, and CI/CD tools such as GitHub Actions, GitLab CI/CD, and Jenkins. Skilled in infrastructure automation and cloud platforms including AWS and Azure. Demonstrated success in developing secure DevSecOps pipelines, implementing observability with Prometheus, Grafana, and Loki, troubleshooting production incidents, and enhancing deployment reliability. Experienced in supporting critical financial and product environments and leveraging AI-assisted observability to expedite incident analysis and operational automation.

SKILLS

- | | | |
|--|------------------------|----------------|
| • Kubernetes | • Docker | • Helm |
| • ArgoCD | • GitHub Actions | • GitLab CI/CD |
| • Jenkins | • Git | • AWS |
| • Azure DevOps | • Prometheus | • Grafana |
| • Loki | • Ansible | • Nginx |
| • Continuous Integration and Continuous Delivery | • Rabbitmq | • Kafka |
| • DevOps Jenkins | • Openshift | • RHEL |
| • Terraform | • Monitoring Solutions | • Logging |
| • I3-observability | | |

CERTIFICATION

- Microsoft Azure Fundamentals: AZ-900 Exam Prep
- Microsoft Certified Azure Fundamentals

WORK EXPERIENCE

DevOps Consultant - Deloitte Consulting

Nov 2025 - Present

- Manage DevOps and Site Reliability Engineering (SRE) operations for enterprise-grade applications on Kubernetes-based cloud-native platforms.
- Design and maintain robust CI/CD pipelines using GitHub Actions and GitHub Enterprise to enhance release consistency and automate deployments.
- Implement GitOps deployment methodologies with ArgoCD, Helm, and Kustomize to ensure declarative, repeatable, and scalable application delivery.
- Integrate DevSecOps quality and security gates leveraging SonarQube, Black Duck, and Gitleaks to enforce code quality and vulnerability compliance.
- Build and optimize comprehensive monitoring, logging, and alerting frameworks using Prometheus, Grafana, Loki, and AWS CloudWatch to ensure system observability.
- Troubleshoot production incidents across Kubernetes environments, networking, CI/CD pipelines, ingress controllers, TLS configurations, and application layers to enhance system reliability and scalability.
- Apply AI-assisted operational practices to analyze technical signals and expedite root-cause analysis for faster incident resolution.

Site Reliability Engineer 2 - The Clearing Corporation of India (CCIL)

May 2025 - Nov 2025

- Ensured high availability and operational reliability of critical financial market applications handling large-scale trade workloads.
- Diagnosed and resolved GitLab CI/CD pipeline failures, enhancing build and deployment stability.
- Deployed and managed containerized applications on on-premises OpenShift Container Platform (OCP).
- Automated deployment processes, environment provisioning, and operational workflows using Ansible.
- Administered GitLab repositories, including user onboarding, permission management, and access control configurations.
- Integrated OpenText Identity and Access Management solutions for robust application authentication and authorization.
- Designed and implemented Grafana dashboards and Prometheus alerting rules to monitor application, infrastructure, pipeline, and business-critical metrics.
- Configured and optimized NGINX and NGINX Plus for efficient routing and load balancing.

DevOps Engineer - Quixy

Oct 2022 - May 2025

- Led the automation of build and deployment processes for .NET applications, transforming manual delivery into efficient CI/CD pipelines.
- Administered Docker containerization and Kubernetes orchestration to enable scalable and reliable application deployments.
- Configured and maintained Kubernetes clusters, including worker node setup and high availability optimization.
- Designed and managed Kubernetes networking and Ingress Controllers for effective traffic routing and load balancing.
- Deployed and maintained microservices architectures using Helm Charts and ArgoCD for streamlined application management.
- Implemented automated SSL/TLS certificate generation and renewal workflows with Certbot integrated into Kubernetes Ingress.
- Configured and optimized Git, Bitbucket, Jenkins, and Bitbucket Pipelines to enhance code integration and continuous delivery.
- Managed container artifact lifecycle using Harbor, ensuring secure and efficient image storage and distribution.
- Established Grafana and Prometheus monitoring and alerting systems, significantly improving system reliability and performance insights.

EDUCATION

2020 B.Tech / B.E. | Electrical
Aditya institute of technology &
management

KEY ACHIEVEMENTS

Achievements

Improved deployment speed by 40% through streamlined CI/CD automation.

Reduced production incidents by 35% via enhanced monitoring and proactive alerting.

Supported 99.9% uptime for critical enterprise application environments.
